PROGRAM

Efficiency in the Chemical Supply Chain

BDI webinar on SDScom and data exchange

6. APRIL 2017, 10:00 AM – 12.00 PM

The past years have shown several initiatives to improve data exchange through standardisation, all of which are meanwhile used as the blueprint for data structures or data exchange. This web conference, held only six months after the last BDI workshop, marks the start of a new phase in which the goal are efficiency gains via better coordination of SDScom, ESCom and EuPhraC. It will outline new challenges, and the status of project coordination. Follow-up workshops will be held face-to-face, annually in every spring, while more technical workshops take place every fall.

In the spirit of open source / open data projects, all participants will have the chance to contribute ideas to the future agenda and thus will collectively set priorities for implementation.

Registration: until 23.03.2017, free of charge.

Please book early. The number of participants is limited for technical reasons

Programme

From 09:45

Registration

10:00

Welcome and introduction

Dr. Thomas Holtmann, BDI

10:10

Status ESCOM project

Pilot project

End of XML freeze period

N.N.

10:30

Quality Improvements in SDScom 4.3.0

Migration: How to deal with incompatibilities

EuPhraC and SDSCom: structure mapping project in 2017

Workflow for future change requests on structure

Dr. Anita Hillmer, Nils Jattkowski

11:00

Outside the SDS: Other developments along chemical supply chain data exchange

SUMI implementation

The creative commons license agreement

Development support / Request for templates and tools

Dr. Dirk Henckels, Qualisys GmbH

11:30

Outlook and Release Planning

Thilo Domay, Daimler AG

11:40

Discussion
